

Value to your patients, valuable to your practice

The *digene* HPV Test

Positive HPV results — great clinical care

These women were Pap-negative/HPV-positive. Because their physician adopted HPV co-testing with a Pap for all women 30 and older, they and their clinicians worked together for good outcomes.

The risk of cervical cancer is real for nearly every sexually active woman, and adding the HPV test to the Pap gives physicians and women more sensitive screening, earlier detection, and and greater peace of mind.

— Dr. Mamie Bowers

Jodi McKinney: diagnosed by Dr. Mamie Bowers with CIN 2

I feel extremely lucky that I was able to catch my cervical disease at such an early stage, and that I didn't have to go through any major surgeries or other treatments. I was able to move on with life and my family.

— Jodi McKinney

Jodi McKinney has been a patient at my practice for many years. I've delivered her five children, and she's come on-time, every time for her Pap tests (which were always normal) and annual exams. She's that woman next door who did everything right. Given this history and her healthy lifestyle, she was not really on my radar for being at high risk for cervical cancer.

— Dr. Mamie Bowers

Micheline Fornarotto: diagnosed by Dr. Alan Welt with adenocarcinoma

I feel eternally grateful for the HPV test. If Dr. Welt had not asked me for my consent to have the HPV test, I may not be sitting here today as a cervical cancer survivor.

– **Micheline Fornarotto**

In September 2005, I began routine screening with the HPV test for women over 30, and today, all five physicians in my practice do the same. There is abundant data supporting HPV testing for primary screening and now, based on my personal experience, I have a great deal of confidence in the value of the HPV test.

– **Dr. Alan Welt**

Bette Cockrell: diagnosed by Dr. Jay Staub with invasive squamous cell carcinoma

I am so grateful to Dr. Staub for adopting the HPV test into his practice. Without it, I'm not sure if I'd be here today. But I am – and I hope that by sharing my story all women over 30 will go to their annual gynecologist visit and ask their doctors for the HPV test, because knowing your cervical cancer risk could save your life.

– **Bette Cockrell**

Based on her history, my patient Bette Cockrell – a longtime patient with 12 years of normal Pap tests and a healthy lifestyle – appeared to be at low risk for cervical cancer. However, the HPV test gave us an entirely different picture.

– **Dr. Jay Staub**
